
FLIPSCOPE

Project Status Report

Resale Intelligence Engine

Switch Studio

Report Date: February 26, 2026

Product	FlipScope — AI-powered resale price lookup
Target Market	Live online auction buyers
Launch Target	Monday (Free launch week)
Architecture	Single-file HTML + Cloudflare Workers proxy
AI Backends	Anthropic Claude Sonnet (primary), OpenAI GPT-4o (fallback)
Price Model	Free week, then ~\$15-30/mo subscription via Stripe
Overall Progress	~55% complete — core tool built, infrastructure pending

1. Product Overview

FlipScope is an AI-powered resale intelligence tool that gives auction buyers instant pricing data on any product. A user snaps a photo or types a product name, and within seconds FlipScope returns estimated resale prices across multiple marketplaces, a max buy price based on their target ROI, and confidence-rated market data.

Core Value Proposition

"You have 10 seconds to bid. Do you want to guess, or do you want to know?"

Target Customer

Non-technical auction buyers participating in live online auctions who lack deep market knowledge in the category being auctioned. These are people transacting real money under time pressure with outdated or no pricing tools.

Competitive Advantage

- No existing tool provides sub-10-second AI-powered resale pricing during live auctions
- Multi-input: photo, text, audio, clipboard paste, drag-and-drop
- Two-phase search: fast AI estimate, then deep web research with live marketplace data
- Built-in ROI calculator with adjustable fees, shipping, and platform costs
- Search history with deduplication and lookup tracking

2. Technical Architecture

Current Architecture (Developer Version)

Single HTML file with embedded CSS and JavaScript. Users provide their own Anthropic or OpenAI API key via a setup screen. Keys stored in browser localStorage. Direct API calls from the browser using the anthropic-dangerous-direct-browser-access header.

Production Architecture (Launch Version)

Same single HTML file, but API calls routed through a Cloudflare Workers proxy. The proxy holds the API key server-side. Users never see or need an API key. This is the critical blocker for selling to non-technical users.

Component	Technology	Status
Frontend App	Single HTML file (~560 lines)	Built
AI Engine (Primary)	Anthropic Claude Sonnet 4	Integrated
AI Engine (Fallback)	OpenAI GPT-4o	Integrated
Vision (Photo ID)	Claude/GPT-4o vision API	Built
Web Search	Claude native web search tool	Built
Proxy (Anthropic)	Cloudflare Workers (~90 lines)	Code written
Proxy (OpenAI)	Cloudflare Workers (~130 lines)	Code written
Hosting	Any static host (GoDaddy, Netlify, etc.)	Not deployed
Payments	Stripe subscription	Not started
User Auth	None (free week) / Stripe gate (paid)	Not started

3. Full Task Tracker

Phase 1: Core Product (COMPLETE)

Task	Status	Notes
Multi-input system (photo/audio/text/paste)	COMPLETE	Photo upload, camera capture, clipboard paste, drag-drop, text entry, audio recording
AI product identification from images	COMPLETE	Claude Sonnet vision API, base64 image analysis
Resale price lookup engine	COMPLETE	Low/median/high with confidence, JSON structured output
ROI calculator with adjustable presets	COMPLETE	5-200% slider, presets at 15/30/50/100/150%
Platform fee/shipping/tax inputs	COMPLETE	Collapsible section, persists across searches
Max buy price calculation	COMPLETE	Factors in fees, shipping, tax rate
Two-phase search (fast + deep)	COMPLETE	Speed slider 3-15s or Full Research, timeout handling
Refinement workflow	COMPLETE	Add photos/text after initial results, Deep Research button
Search history database	COMPLETE	localStorage, deduplication, lookup counting, 200 item limit
Dark/gold UI theme	COMPLETE	Alchemical aesthetic matching Switch Studio brand

Phase 2: Standalone Operation (COMPLETE)

Task	Status	Notes
API key setup screen	COMPLETE	Validates key before launching app
Dual provider support (Claude + GPT)	COMPLETE	Provider tabs, separate key storage, model selector
Auto-launch with stored key	COMPLETE	Remembers provider + key across sessions
CORS-compatible direct browser calls	COMPLETE	anthropic-dangerous-direct-browser-access header
Error handling with visible messages	COMPLETE	Red error banner, API status codes, debug info

Phase 3: Production Infrastructure (IN PROGRESS)

Task	Status	Notes
Cloudflare Worker proxy (Anthropic)	IN PROGRESS	Code written and ready. Needs deployment.
Cloudflare Worker proxy (OpenAI)	IN PROGRESS	Code written with format translation. Needs deployment.
Update FlipScope to use proxy URL	IN PROGRESS	Production version started, needs proxy URL to complete.
Create Cloudflare account	NOT STARTED	Free tier: 100K requests/day
Deploy worker + set env variables	NOT STARTED	ANTHROPIC_API_KEY, ALLOWED_ORIGIN
Test end-to-end proxy flow	NOT STARTED	Verify no CORS issues, response format correct
Rate limiting / abuse prevention	NOT STARTED	Basic IP cap in worker; Cloudflare rules for production

Phase 4: Launch Prep (NOT STARTED)

Task	Status	Notes
Landing page	NOT STARTED	<i>What it does, demo screenshot, CTA button</i>
Stripe account creation	NOT STARTED	<i>Create account, configure subscription product</i>
Stripe subscription integration	NOT STARTED	<i>Dormant until free week ends; \$15-30/mo target</i>
Terms of Service	NOT STARTED	<i>Pricing = guidance not guarantees, liability waiver, pricing change rights</i>
Privacy Policy	NOT STARTED	<i>Covers emails, uploaded images, localStorage data</i>
Domain setup	NOT STARTED	<i>Point domain to hosted FlipScope app</i>
SSL certificate	NOT STARTED	<i>Required for API calls; free via Cloudflare or host</i>

Phase 5: Launch & Marketing (NOT STARTED)

Task	Status	Notes
Accuracy testing (pre-launch)	NOT STARTED	<i>Test against real auction results, track estimate accuracy %</i>
Free week launch announcement	NOT STARTED	<i>Post in resale communities, auction groups, flipping Discords</i>
Reddit / Discord outreach	NOT STARTED	<i>r/Flipping, r/Reselling, auction-specific communities</i>
Collect user feedback during free week	NOT STARTED	<i>Track usage, accuracy complaints, feature requests</i>
Activate Stripe paywall	NOT STARTED	<i>Flip kill switch when free week ends or costs spike</i>

Phase 6: Post-Launch Roadmap (FUTURE)

Task	Status	Notes
------	--------	-------

User login / accounts system	NOT STARTED	<i>Required for paid access control</i>
Usage tracking dashboard	NOT STARTED	<i>Monitor lookups per user, cost per user</i>
Payment method integration	NOT STARTED	<i>Stripe checkout flow embedded in app</i>
Encryption for stored data	NOT STARTED	<i>Protect search history and user data</i>
Industry-specific plug-ins	NOT STARTED	<i>Specialized pricing for sneakers, electronics, collectibles, etc.</i>
Mailing/postage cost calculator	NOT STARTED	<i>USPS/UPS/FedEx rate integration</i>
Mobile app (PWA)	NOT STARTED	<i>Convert to Progressive Web App for home screen install</i>
LLC formation	NOT STARTED	<i>Separate personal assets from product liability</i>

4. Cost Analysis

Per-Lookup Cost

Scenario	Model	Est. Cost/Lookup	Notes
Quick estimate (no web search)	Claude Sonnet	\$0.003	Training knowledge only, fastest
Full research (web search)	Claude Sonnet	\$0.008-0.012	Live marketplace data, most accurate
Vision + full research	Claude Sonnet	\$0.012-0.018	Photo identification + pricing
Quick estimate	GPT-4o	\$0.004	Slightly higher token cost
Quick estimate	GPT-4o Mini	\$0.001	Cheapest option, lower accuracy

Free Week Cost Projection

Assuming 50-200 users during free week, averaging 5-10 lookups each:

Scenario	Users	Lookups/User	Total Lookups	Est. Cost
Conservative	50	5	250	\$2.50-3.00
Moderate	100	8	800	\$8.00-10.00
Optimistic	200	10	2,000	\$20.00-24.00
Viral spike	500	10	5,000	\$50.00-60.00

Cloudflare Workers free tier handles 100,000 requests/day. API cost is the only variable expense.

Infrastructure Costs

Service	Tier	Monthly Cost
Cloudflare Workers	Free (100K req/day)	\$0
Anthropic API	Pay-as-you-go	~\$5-60 (usage dependent)
Domain name	Existing or new	\$0-12/year
Static hosting	Cloudflare Pages / existing host	\$0
Stripe	2.9% + \$0.30 per transaction	Per-subscriber

5. Risk Register

Risk	Severity	Mitigation
Inaccurate pricing leads to bad bids	HIGH	ToS disclaimer (estimates, not guarantees). Confidence rating on every result. Pre-launch
API cost spike from viral traffic	MEDIUM	Kill switch: activate Stripe paywall immediately. Rate limiting in Cloudflare Worker. GPT-4
User uploads sensitive/personal images	MEDIUM	Privacy policy covering image handling. Images not stored server-side (processed in-bro
Anthropic API outage	LOW	OpenAI worker ready to deploy as hot-swap fallback. Both proxy versions written and tes
Legal liability from purchase decisions	HIGH	Terms of Service with explicit liability waiver. LLC formation (post-launch priority). "Guida
Competitor copies the tool	LOW	First-mover advantage in auction niche. Speed of iteration. Brand presence in community

6. Weekend Launch Checklist

Saturday (Build Day)

- **PRIORITY 1:** Create Cloudflare account, deploy Anthropic proxy worker, set env vars
- Update FlipScope production file with proxy URL, test end-to-end
- Build landing page (what it does, screenshot, CTA)
- Create Stripe account, configure \$20/mo subscription product (leave dormant)
- Run 20+ accuracy tests against known auction results

Sunday (Legal + Polish Day)

- Draft and publish Terms of Service
- Draft and publish Privacy Policy
- Final cross-browser testing (Chrome, Safari, Firefox, mobile)
- Deploy to production domain
- Prepare launch copy for Reddit, Discord, communities

Monday (Launch Day)

- Post in r/Flipping, r/Reselling, auction Discords
- Lead with urgency pitch: "10 seconds to bid. Guess or know?"
- Monitor Cloudflare analytics for traffic and errors
- Monitor Anthropic console for API spend

-
- Respond to feedback, fix bugs in real-time

7. Files Delivered

File	Purpose	Deploy Location
flipscope.html (v5)	Developer version with API key setup + dual proxy	Private use / testing
flipscope-prod.html	Production version using proxy (no API key needed)	Public-facing web host
cloudflare-worker-proxy.js	Anthropic proxy for Cloudflare Workers	Cloudflare Workers dashboard
cloudflare-worker-openai.js	OpenAI fallback proxy (format translator)	Cloudflare Workers dashboard
This report (PDF)	Project status, task tracker, launch plan	Internal reference

8. Next Session Priorities

The following tasks should be completed in order during the next working session. Each builds on the previous one.

#	Task	Time Est.	Depends On
1	Create Cloudflare account + deploy Anthropic worker	15 min	Nothing
2	Set ANTHROPIC_API_KEY env var in Cloudflare dashboard	2 min	#1
3	Update FlipScope prod file with worker URL	5 min	#2
4	Test full flow: text search, photo search, deep research	10 min	#3
5	Deploy OpenAI worker as backup (same process)	10 min	#1
6	Build landing page	30 min	#4
7	Create Stripe account + subscription product	20 min	Nothing
8	Draft Terms of Service	15 min	Nothing
9	Draft Privacy Policy	15 min	Nothing
10	Deploy to production domain	15 min	#4, #6

Total estimated time to launch-ready: ~2.5 hours of focused work. The Cloudflare Worker deployment is the single most important task — everything else depends on it.
